COMPACT GEAR MOTOR

K
SERIES

GENERAL SPECIFICATION COMPACT ELECTRIC MOTOR AND GEAR REDUCER

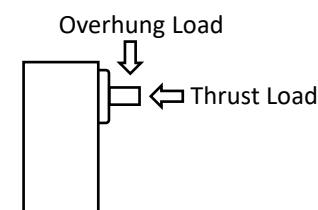

General Specification

Features	Specifications
Insulation Resistance	100 MΩ or more when DC500V is applied between the windings and the frame after rated motor operation under normal ambient temperature and humidity.
Dielectric Strength	Sufficient to withstand 1.5 kV at 50Hz and 60Hz applied between the windings and the frame for 1 minute after rated motor operation under normal operating temperature and humidity.
Temperature Rise	Temperature rise of windings are 80°C or less measured by the resistance change method after rated motor operation with connecting a gearhead or equivalent heat radiation plate.*
Insulation Class	Class B (130°C).
Overheat Protection	Impedance protected. (Optional Overload Thermal Protection)
Motor Protection	IP20 for motor with conductive wire; IP54 for motor with terminal box.
Operating Temperature	-10 °C to +50 °C.
Ambient Humidity	85% or less (non-condensation).
Conformity Certification	CE / CCC

Life Service Factor	Life Service Factor			Specifications:
	5hrs/day Operation	8hrs/day Operation	24hrs/days Operation	
Constant Load	0.8	1	1.5	The service life of the motor usually rely on the quality of its ball bearing. Standard service life of ball bearing is 10,000 hours* Load: Constant continuous running
Light Load	1.2	1.5	2	Frame: 80°C (roller bearing), 50°C (sinter oil bearing) Life expectancy may vary due to frequent load variation
Medium Load	1.5	2	2.5	Remark : Constant Load: Continuous one way operation. Light Load: Frequent start-stop, cam impact. Medium Load: Instant CW/CCW, instant stop.

Gearhead Operation Efficiency Permissible Thrust Load and Overhung Load

MOUNTING INSTRUCTION COMPACT ELECTRIC MOTOR AND GEAR REDUCER

Precautions for Installation

Check the technical specification and voltage on the identification label of the gear motor with your design requirement before any installation. For helical gear motor, gearhead should well-match with the motor dimension and specification.

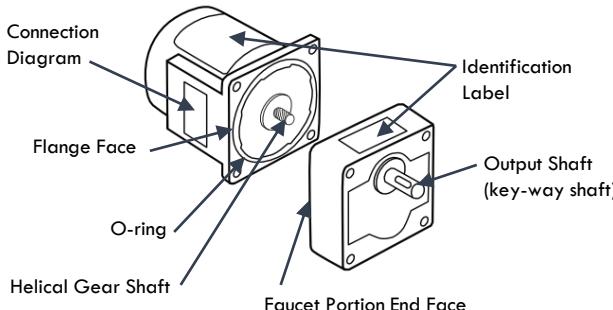

Round shaft motor

After drilling holes on the mounting plate, use 4 screws, washers and nuts to fasten the motor onto the mounting plate (screws and nuts are not offered with this motor). Please make sure there is no gap between the motor's flange face and mounting plate.

Helical gear shaft motor (in combination with gearhead)

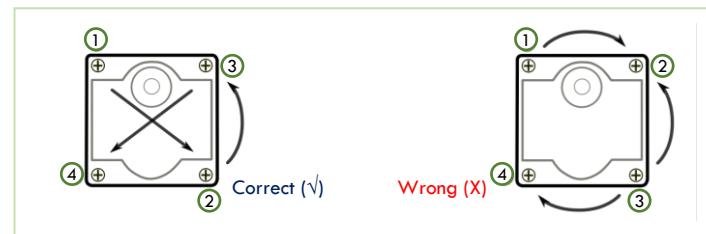

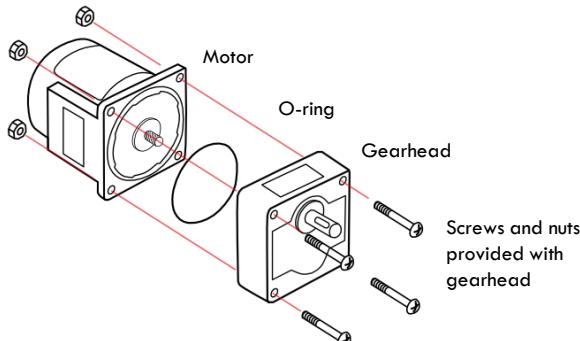

After drilling holes on the mounting plate, use the 4 screws and nuts supplied with the gearhead to fasten gearhead and motor (come with O-ring) on the mounting plate. Make sure the gearhead is installed properly on the motor and there is no gap between the motor flange face and gearhead.

Gearhead is combined with a motor using the recessed areas on each unit as guides. DO NOT contact a tooth tip of pinion shaft to a tooth tip of gearhead. Set each tooth of motor and gearhead correctly and gently press and turn the gearhead in clockwise and counter-clockwise.

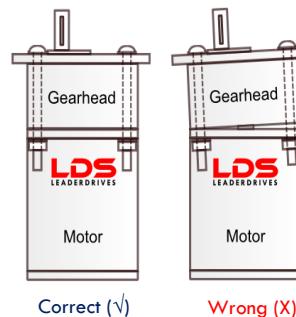

Remark: When face mounting the geared motor to an assembly, Do not remove or twist the gearhead from or on the motor. This will cause the O-ring to deform (become distorted or damaged) resulting in grease leakage when reassembled.

During replacement or maintenance, please replace the o-ring if it is damaged or distorted. You may contact your LDS representative to obtain the o-ring for free of charge.

Tightening of fixing bolts

Do not forcibly assemble the motor and gear head. Do not damage the tooth of the motor and gear head. Incorrect assembly results in abnormal noise generation or shortened unit life.

Gearhead Installation

Install gearhead properly and there is no gap between the motor flange face and gearhead.

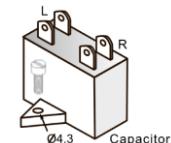

On installation, the mounting of the motor must allow a free-flow of cooling air over the surface of the motor (leave a minimum 20~30mm space from the rear cover of the motor).

Screw used for installation			
Model (Motor)	Model (Gearhead)	Screw Size	Installation Torque
2IK/2RK	2GN	M4	20kgfcm
3IK/3RK	3GN	M5	25kgfcm
4IK/4RK	4GN	M5	25kgfcm
5IK/5RK	5GN/5GU	M6	30kgfcm
6IK/6RK	6GN/6GU	M6	35kgfcm

Important Instruction for Capacitor Installation

Before installation, please ensure correct capacitor is being used with your motor (supplied with single phase motor).

Capacitor should be installed at least 10cm away from the motor by using M4 screws. Too close to a motor will result in excessive heat hence shorten the lifespan of capacitor.

COMPACT GEAR MOTOR

K
SERIES

GLOSSARY OF TERMS COMPACT ELECTRIC MOTOR AND GEAR REDUCER

AC Electric Motor

An AC motor is an electric motor that is driven by alternating current. It is used in the conversion of electrical energy into mechanical energy. This mechanical energy is made from utilizing the force that is exerted by the rotating magnetic fields produced by the alternating current that flows through its coils.

Ambient Temperature

Ambient temperature is the temperature of the air surrounding the motor. This is the threshold point or temperature the motor assumes when shut off and completely cool. Higher ambient temperatures increase internal pressure, which will require an increase to the service factor used. High or low temperatures may employ different seal materials and lubrication viscosities.

Ampere / Current (A / Amp / Amps)

Amps figures on the nameplate are just the motor's maximum ratings. They do not reflect actual operating conditions of your machine/equipment. Use a True-RMS Industrial Logging Multi-meter with a clamp accessory to measure the ampere to check if the motor operation is under-loaded (and thus costly to operate) or over-loaded (and at risk of burnout).

Causes of Motor Failure

Motor overload occurs when a motor is under excessive load. Its symptoms are excessive current draw, insufficient torque and overheating. **Motor overheat** refers to an unexpected rise of temperature in motor windings that can cause damage to the motor stator. It is a major cause of premature wear on electrical and mechanical components that ultimately leads to motor failure.

Coaxial Axial Cooling Fan

Axial Fan is designed for force-air cooling of electric motor, and to protect the electric motor by keeping them at an optimal cooling temperature. LDS uses renowned Maglev Motor Axial Fan with high airflow (40CFM) to enhance a superior life expectancy of the motor (especially for single phase motor).

Efficiency (%)

Motor efficiency is the ratio between the amount of mechanical work the motor performs and the electrical power it consumes to do the work, represented by a percentage. A higher percentage represents a more efficient motor. Electric motor efficiency is dependent on (but not limited to) design, materials, construction, rating, load, power quality, and operating conditions.

Electrical Grounding (Earthing)

Electrical grounding / Grounding / Earthing refer to a safety measure used to prevent people from accidentally coming in contact with electrical hazards. Electrical Grounding is essential in every equipment and can be done through attaching the ground conductor to any of the mounting bolt of the motor.

Frequency (Hz)

To operate successfully, the motor frequency must match the power system (supply) frequency. In Malaysia and Singapore, the frequency is 50 Hz (cycles). In other parts of the world, the frequency may be 50Hz or 60 Hz.

Insulation class

Insulation classes group insulations by their resistance to thermal aging and failure. There are two common insulation classes in LDS products:

Insulation Class B : Max 130°C / Insulation Class F : Max 155°C.

Inverter (Frequency Inverter) vs. Speed Controller.

A frequency inverter changes output voltage frequency and magnitude to vary the speed, power, and torque of a connected three phase induction motor to meet load conditions. A speed controller controls the rotation speed of single phase capacitor run induction motor via a modular tacho-generator (permanent magnet type) connected to the rear shaft of the motor (rotor).

Over-voltage refers to the voltages exceeding rated voltage designed in the motor. A 10% overvoltage means motor will be overloaded by approximately 10%.

Poles

LDS motors are available 2Pole (3000rpm), 4Pole (1500rpm) and 6Pole (1000rpm), in 50Hz System (8pole – 750rpm is not available).

Power Rating / Output Power

A power rating is a measurement of the maximum amount of power that can be used with a specific tool or device. It is measured in Watt (W), Kilowatt (kW) or Horsepower (HP).

Rated Output Torque [Kgm / Kgcm / Nm]

This is the limit of mechanical strength of the speed reduction mechanism. Make sure that the applied torque, including the acceleration torque and load fluctuation, does not exceed the permissible torque (the load should never be greater than what the motor is rated for).

Rated Voltage (V)

Motors are designed to yield optimal performance when operating at a specific voltage level. LDS Motors are available in single-phase (1Ø) 100-110V and 220-240V, three-phase (3Ø) 220-240V and 380-415V.

Service Factor (S.F)

Service factor can be generally defined as an application's required value over the rated value of the unit. Service factor should be determined for conditions such as non-uniform load, hours of service, and elevated ambient temperature. A service factor of 1.0 means a unit has just enough capacity to handle the application. There is no tolerance for additional requirements, which could cause the gearbox to overheat or fail.

Temperature / Temperature Rise in Motor

Temperature rise is the change within a motor when operating at full load. When a motor is operating, all energy losses of the motor are transformed into heat, causing the motor temperature to rise. In an ambient temperature area, surface temperature of LDS's 1-phase motor will rise to 80°C after 60 minutes of continuous operation; 3-phase motor's surface temperature will rise to 40°C after 60 minutes of continuous operation. (Use infrared thermometer to measure the motor temperature. Do not judge the motor temperature by touching the motor surface, or you could get injured).

Thermal Overload Protection (TP)

Thermal protection is a method of electric motor protection that is activated when a motor operating at the rated voltage locks up for some reason with the power still being supplied. It uses a thermal relay inside the motor to break the circuit to the winding coil at a temperature below the level that would cause burning (overheating). Other protection methods including overload relay, motor thermostat and fuse.

Type of Load

High shock or impact loads can cause increased wear on the gear teeth and shaft bearings. This wear could cause premature failure if not accounted for when sizing. These loads will require an increased service factor. **Uniform loads** are loads that remain constant during the application, while non-uniform loads change during the application. **Non-uniform loads**, even if small, will require a higher service factor than uniform loads. An example of a uniform load would be a conveyor with a consistent product amount riding on it. A non-uniform load would be any sort of intermittent cutting application. This intermittent cutting force causes a periodic increase in the torque on the gearbox, which is a non-uniform load.

Under-Voltage will cause under-power of electric motor. The motor slip also increases proportionally to the square of the voltage drop. As a result, the motor will be running slower with a lower output and the process would not be producing as expected.

Unbalanced Voltages are unequal voltage values on 3-phase circuits that can exist anywhere in a power distribution system.

COMPACT SPIRAL BEVEL GEAR MOTOR

25W ~ 250W | Gear Reduction Ratio 7.5 ~ 225

Motor output power : 25W to 250W.

- > Induction Motor
- > Speed Control Motor
- > Inverter Motor
- > Electromagnetic Brake Motor
- > Clutch Brake Motor

NEW

Spiral bevel gear design offers constant backlash throughout the service life of the gearbox.

- * Quiet operation and longer lifespan
- * Higher efficiency and output torque
- * Lower operating temperature

Gearbox design with smooth and clean surface without any protrusions.

Ideal design for sanitary environment with quicker and easier cleaning process.
It reduces operating costs specially in food processing applications.

Compact Right Angle Spiral Bevel Gear Reducer Model :

Motor Rating (Watt)	Frame Size	Mounting PCD	Hollow Output Shaft Bore Dia. x Length
25W	80x80mm	94mm	Dia.15mm x 82mmL
40W~180W	90x90mm	104mm	Dia.17mm x 86mmL
200W~250W	104x104mm	120mm	Dia. 22mm x 103mmL

COMPACT GEAR MOTOR

K
SERIES

INDUCTION MOTOR SINGLE PHASE (1Ø – CAPACITOR RUN)

The most common of all motors is the standard Induction Motor, it's designed for continuous 24/7 operation in one direction. While it is capable of going both forward and reverse, its main role is just single direction use.

General Specifications:

Output Power (Watt)	Product Code		AC Voltage (V)	Frequency (Hz)	Current (A)	Starting Torque (Kg.cm)	Rated		Number of Pole (P)	Capacitor

COMPACT GEAR MOTOR

K
SERIES

INDUCTION MOTOR THREE PHASE (3Ø)

The most common of all motors is the standard Induction Motor, it's designed for continuous 24/7 operation in one direction. While it is capable of going both forward and reverse, its main role is just single direction use.

General Specifications:

Output Power (Watt)	Product Code		AC Voltage (V)	Frequency (Hz)	Current (A)	Starting Torque (Kg.cm)	Rated		Number of Pole (P)

COMPACT GEAR MOTOR

K
SERIES

**REVERSIBLE MOTOR - RATED 30MIN
SINGLE PHASE (1Ø)**

The Reversible Motor is designed for start/stop operations with changes of direction frequently. It is rated at 30 minutes while used in this fashion. It uses a simple damping brake to slow the motor quickly to be able to change direction efficiently. This generates heat when the motor is frequently changing direction which is why all reversible motors are rated for 30 minutes only.

General Specifications:

COMPACT GEAR MOTOR

K
SERIES

ELECTROMAGNETIC BRAKE MOTOR SINGLE PHASE (1Ø – CAPACITOR RUN) POWER-OFF ACTIVATED TYPE

Electromagnetic Brake motor is ideal for vertical application in which the load must be held. It's a load-holding brake motor with a power off activated type electromagnetic brake, where the motor stops instantaneously when the power is cut off, while still holding the load in position (optimal solution for emergency brakes and vertical load applications).

General Specifications:

COMPACT GEAR MOTOR

K
SERIES

ELECTROMAGNETIC BRAKE MOTOR THREE PHASE (3Ø) POWER-OFF ACTIVATED TYPE

Features:

- DC Electromagnetic Brake with built in Rectifier (Input voltage AC220V~240V)
- Brake Precision – The electromagnetic brake controls the rotation within 2-3 turns, making it suitable for forward/reverse operation
- Ideal for low frequency of braking operation (Maximum 6 cycles of start/stop per minute)
- Variable Speed Brake Motor and Asynchronous Brake Motor configurations available.

Electromagnetic Brake	Motor Rating	
	6W-25W	40W-180W
Static friction torque (kgcm)	5.1	10.2
Rated voltage (DC-V)	22~24	22~24
Input voltage (Rectifier)	220V~240V	220V~240V
Capacity (Watt)	4W	7W
Movement (Start/Stop Operation)	Maximum 6 braking cycles per minute with a 1~2 second braking interval	

General Specifications:

COMPACT GEAR MOTOR

K
SERIES

REVERSIBLE ELECTROMAGNETIC BRAKE MOTOR SINGLE PHASE (1Ø – CAPACITOR RUN) POWER-OFF ACTIVATED TYPE

The Reversible Electromagnetic Brake Motor is designed for start/stop operations with changes of direction frequently. It uses a simple damping brake in addition to the electromagnetic brake to slow the motor more quickly to be able to change direction efficiently. This generates heat when the motor is frequently changing direction which is why all reversible electromagnetic brake motors are rated for 30 minutes only.

COMPACT GEAR MOTOR

K
SERIES

REVERSIBLE ELECTROMAGNETIC BRAKE MOTOR THREE PHASE (3Ø) POWER-OFF ACTIVATED TYPE

Features:

- DC Electromagnetic Brake with built in Rectifier (Input voltage AC220V~240V)
- Brake Precision – The electromagnetic brake controls the rotation within 2-3 turns, making it suitable for forward/reverse operation
- Ideal for low frequency of braking operation (Maximum 6 cycles of start/stop per minute)
- Variable Speed Brake Motor and Asynchronous Brake Motor configurations available.

Electromagnetic Brake	Motor Rating	
	6W-25W	40W-180W
Static friction torque (kgcm)	5.1	10.2
Rated voltage (DC-V)	22~24	22~24
Input voltage (Rectifier)	220V~240V	220V~240V
Capacity (Watt)	4W	7W
Movement (Start/Stop Operation)	Maximum 6 braking cycles per minute with a 1~2 second braking interval

COMPACT GEAR MOTOR

K
SERIES

CLUTCH & BRAKE MOTOR SINGLE PHASE (1Ø – CAPACITOR RUN) FREQUENT START-STOP OPERATION

The DC 24V Clutch and Brake motor use a high precision, highly responsive clutch & brake for frequent start/stop operation. When the brake is in use, the clutch will separate the link from the brake, so there are no overruns, making positioning precise and accurate.

Clutch & Brake Models	GN –CB Type		GU-CB Type

VARIABLE SPEED MOTOR WITH ANALOGUE TYPE SPEED CONTROLLER – SINGLE PHASE

USM72

Variable Speed Motor uses an Induction Motor with a modular tacho-generator fitted to the rear of the motor. The tacho-generator is made of a magnet connected directly to the motor shaft and a stator coil that detects the magnetic poles, and generates an AC voltage at 12 cycles per revolution. The motor can run in either forward or reverse directions. It has independent powerful cooling fan to cool down motor in order to achieve longer lifespan.

Single Phase 220V/230V available upon request.

SPEED CONTROLLER OPTIONS

USM71 Series ▪ USM72 Series (Speed Range 90~1350rpm)

- > Unit Type Analogue Speed Controller (Non-LED display) / Panel Mounting
- > Motor Rating : 6W ~ 250W (6W, 15W, 25W, 40W, 60W, 90W, 120W, 150W, 200W & 250W)
- > Input Voltage : 1phase 100V~110V (USM71) / 1phase 220V~240V (USM72), 50Hz/60Hz.

Key Features :

- > Simplest configuration and operation for all users.
- > Forward and Reverse operation via CW-Com / CCW-Com connection.
- > Offers basic functions : Adjustable speed, Forward/Reverse Running, On-off operation.

USM1000 Series ▪ USM2000 Series (Speed Range 90~1350rpm)

- > Unit Type Digital Display Speed Controller / Panel Mounting
- > Motor Rating : 6W ~ 250W (6W, 15W, 25W, 40W, 60W, 90W, 120W, 150W, 200W & 250W)
- > Input Voltage : 1phase 100V~110V (USM1000) / 1phase 220V~240V (USM2000), 50Hz/60Hz.

Key Features :

- > Simplest configuration and operation for all users.
- > Digital display indicate motor running speed (rpm)
- > Offers basic functions : Adjustable speed, Forward/Reverse Running, On-off operation.

NEW

USP72 Series (Speed Range 150~1350rpm)

- > Unit Type Digital Display Speed Controller / Panel Mounting
- > Motor Rating : 6W ~ 250W (6W, 15W, 25W, 40W, 60W, 90W, 120W, 150W, 200W & 250W)
- > Input Voltage : 1phase 220V~240V (USP72), 50Hz/60Hz.

Key Features :

- > Digital display shows real time motor speed (rpm) (optional setting) for ease of monitoring.
- > Allow acceleration and deceleration operation for soft-starting and soft-stopping.
- > Forward and reverse operation via digital setting (optional CW or CCW wiring).
- > Allow pre-set of Max/Min speed range between 200~1350rpm.

NEW

DSC72 Series (Speed Range 150~1350rpm)

- > Din Rail Type Digital Display Speed Controller with external VR / Din Rail Mounting
- > Motor Rating : 6W ~ 250W (6W, 15W, 25W, 40W, 60W, 90W, 120W, 150W, 200W & 250W)
- > Input Voltage : 1phase 220V~240V (DSC72), 50Hz/60Hz.

Key Features :

- > Compact size / Space-saving slim design for adjustable speed operation with digital display
- > Digital output terminal (for brake control (on/off), alarm output signal / output signal when motor stop running).
- > Allow acceleration and deceleration operation for soft-starting and soft-stopping.
- > External Potentiometer (VR) enables long distance speed adjustment from controller.

SS61 Series ▪ SS62 Series (8pin) (Speed Range 90~1350rpm)

- > Din Rail Type Analogue Speed Controller with external VR / Din Rail Mounting
- > Motor Rating : 6W ~ 250W (6W, 15W, 25W, 40W, 60W, 90W, 120W, 150W, 200W & 250W)
- > Input Voltage : 1phase 100V~110V (SS61) / 1phase 220V~240V (SS62), 50Hz/60Hz.

Key Features :

- > Compact design / space saving adjustable speed controller.
- > External VR enables long distance speed adjustment from controller.
- > Offers basic functions : Adjustable speed, Forward/Reverse Running, On-off operation

SD61 Series ▪ SD62 Series (8pin) (Speed Range 90~1350rpm)

- > Din Rail Type Analogue Speed Controller / Din Rail Mounting
- > Motor Rating : 6W ~ 250W (6W, 15W, 25W, 40W, 60W, 90W, 120W, 150W, 200W & 250W)
- > Input Voltage : 1phase 100V~110V (SD61) / 1phase 220V~240V (SD62), 50Hz/60Hz.

Key Features :

- > Compact design / space saving adjustable speed controller.
- > Built-in Potentiometer (VR) reduces wiring and trunking demand in the panel box.

SS31 Series ▪ SS32 Series (11pin) (Speed Range 90~1350rpm)

- > Din Rail Type Analogue Brake Pack Speed Controller with external VR / Din Rail Mounting
- > Motor Rating : 6W ~ 250W (6W, 15W, 25W, 40W, 60W, 90W, 120W, 150W, 200W & 250W)
- > Input Voltage : 1phase 100V~110V (SS31) / 1phase 220V~240V (SS32), 50Hz/60Hz.

Key Features :

- > Simple adjustable speed controller with electronic braking.
- > To stops the motor instantly with an electronic brake (trigger by current).
- > External Potentiometer (VR) enables long distance speed adjustment from controller.

COMPACT GEAR MOTOR

K
SERIES

ASYNCHRONOUS MOTOR WITH LED DIGITAL DISPLAY IGBT INVERTER – SINGLE PHASE

IGBT-K100

Asynchronous Motor a.k.a. Inverter Duty Motor is designed for optimized performance to run with variable frequency drive. It offers longer product lifespan, consistent performance, and less vibration operation.

Features:

- The package include a 3phase motor operated by 1phase IGBT inverter with LED High Brightness Display.
- 120% | 150% Overload Protection with wide speed control range from 0-400Hz by operation panel or speed potentiometer.
- Spec-Key button on the panel allows preset of 2 different speeds, forward/reverse operation instantly.
- Acceleration and deceleration control enables soft-start and soft-stop operation. Setting of upper and lower speed limits, and counter function.
- Compatible mounting with conventional USM Type speed controller.
- Instantaneous reversal, electromagnetic brake, clutch & brake options available.

SERIES

ASYNCHRONOUS MOTOR WITH FC400 FREQUENCY CONTROLLER – SINGLE PHASE

FC400

Asynchronous Motor a.k.a. Inverter Duty Motor is designed for optimized performance to run with variable frequency drive. It offers longer product lifespan, consistent performance, and less vibration operation.

Features:

- The package include a 3phase motor operated by 1phase Frequency Controller.
- Low cost with compact design controller for simple operation requirement.
- Economical construction offers basic controller functions with consistent performance.
- Allow acceleration and deceleration of speed to provide soft-starting and stopping.
- Direct replaceable - same size and mounting with major speed control motors (USM / USP / IGBT)

General Specifications (4 Pole Motor):

Output Power (Watt)	Product Code		AC Voltage (V)	Frequency (Hz)	Current (A)	Starting Torque (Kg.cm)	Rated		Number of Pole (P)
	Round Shaft / Key Shaft	Helical Shaft / Helical Shaft-X					Torque (Kg.cm)	Rated Speed (RPM)

COMPACT INVERTER

IGBT SERIES

1PHASE INVERTER WITH 150% OVERLOAD PROTECTION

MODEL NO	IGBT - K100	IGBT - K200
Motor Rating (maximum)	25W ~ 120W (1/6HP)	25W ~ 250W (1/3 HP)
Rated Output Capacity	0.4kVA	0.6kVA
Rated Output Current	1 Amp	1.5 Amp
Rated Output Voltage	AC 3 Phase 220V (3Ø220V)	
Range of Output Frequency	0.1Hz ~ 400Hz	
Power Source Voltage	AC 1 Phase 200V~240V (1Ø), 50Hz/60Hz	
Input Current	2 Amp	3 Amp
Permissible AC Power Source Fluctuation	200V ~ 240V, 50Hz/60Hz, ± 5%	
Overload Protection	120% 150% of rated output current for 1 minute	
Cooling Method	Self-cooling	
Protection Level	IP20	
Dimension	Body 52 x 127 x 60mm • Mounting Frame: 60 x 100 x 3mm	
Weight	0.4KG	
Options	With Braking Transistor / Without Braking Transistor	
Remark	Product dimension and mounting compatible with US Type Speed Controller (USM71-USM72 / US71-US72)	

GENERAL SPECIFICATIONS / CONTROL CHARACTERISTICS

Control Method:	Voltage vector sinusoidal PWM control (V/F control) Switching frequency : 800~16kHz	Other Functions:	Automatic operation for energy-saving • Automatic torque compensation • Automatic adjustment for output voltage stability • Automatic adjustment of switching frequency • Slip compensation / Counter function • Restart after instantaneous power failure • Modbus (RS-485) communication • Over-torque detection • Jump frequency • Setting for upper and lower limits of output frequency • 8-preset speeds • S-curve acceleration & deceleration • Temperature management • Parameters duplication
Frequency Range:	0.1Hz ~ 400.00Hz	Frequency Setting Signal:	Operation panel (including KP-601A keypad): ▲▼ Analogue Signal: (DC 0 ~ 10V) / 0~100% Digital Signal: Jog speed, 8-preset speeds Modbus (RS485) Communication
Resolution:	Digital Command : 0.01Hz • Analogue Command: 0.06Hz / 60Hz	Operation Signal:	Operation panel (including KP-601A keypad): RUN / STOP • Digital Signal: FWD (forward) / REV (reverse) rotation control • Modbus (RS-485) communication
Overload Protection:	150% of rated output current for 1 minute	Multi-Function Inputs:	3 programmable input terminal: X1~X3 • Response time (1~255, unit 1ms) • Refer to the F5.19~F5.21 functions setting description.
DC Braking:	Start/Stop Braking Time: 0 ~ 60.0 second • Stop Braking Frequency : 0.1Hz ~ 60Hz • Braking Ability: 0~150% of rated current	Analogue Inputs:	1 set of analogue input: VI (DC 0 ~ 10V) • Analogue filter (0~255, unit 5ms), the dead band of analogue frequency, gain and bias are adjustable
Braking Torque:	Approximately 20%		
V/F Pattern:	Linear, Energy-Saving mode (automatic adjusting V/F pattern according to the load condition) • Square of 1.5, 1/7 and 2 curves. • V/F pattern (2 V/F points) • Output voltage adjustment of V/F pattern • (Variable voltage adjustment of V/F pattern for acceleration and deceleration).		

COMPACT INVERTER

IGBT

SERIES

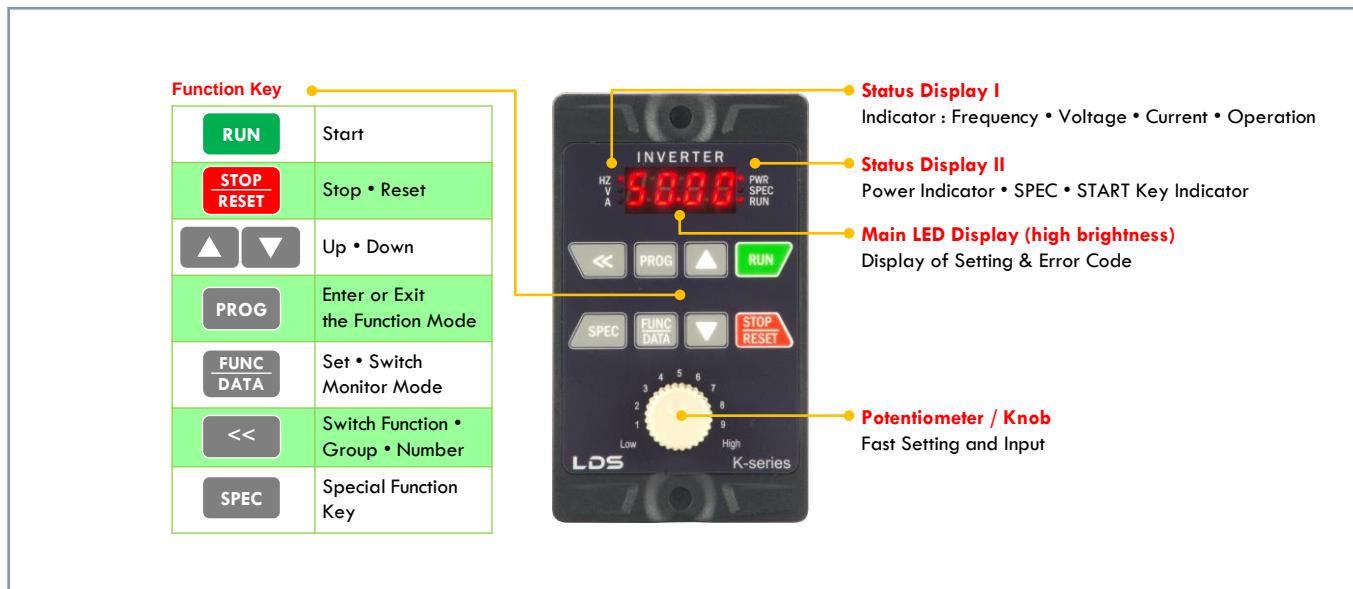

1PHASE INVERTER WITH 150% OVERLOAD PROTECTION

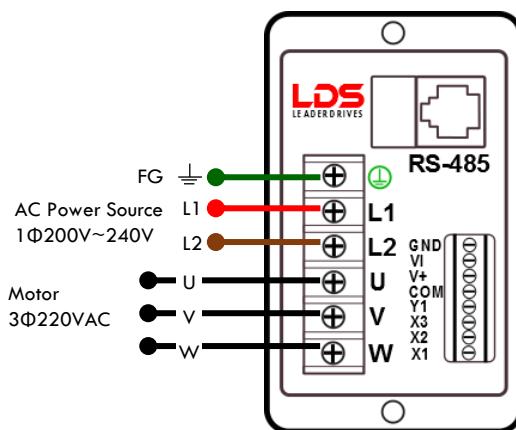

The compact IGBT inverter is especially advantageous for standard application by virtue of its user friendliness. It offers simple and safe operability, energy saving, compact design as well as superior performance. The inverter is used in numerous application such as conveyor drives, feeders, machining tool and door drives. It is compatible with Unit Type AC Speed Controller (US series).

Features:

- 150% Overload Protection.
- Wide speed control range from 0-400Hz by operation panel or speed potentiometer.
- Spec-Key button on panel allows switch of 2 different speeds, forward/reverse operation instantly.
- Acceleration and Deceleration control enables soft-start and soft-stop operation.
- Setting of upper and lower speed limits, DC braking, and counter function.
- Compact design enable panel mounting and space saving.

MAIN CONTROL CIRCUIT TERMINALS

PORTABLE KEYPAD

The keypad

- Enable remote control of the inverter via Modbus (RS485) Communication.
- Duplication of parameter from Inverter to Inverter.

Acrylic Protective Cover

DIMENSION : SPEED CONTROLLER OF COMPACT MOTOR

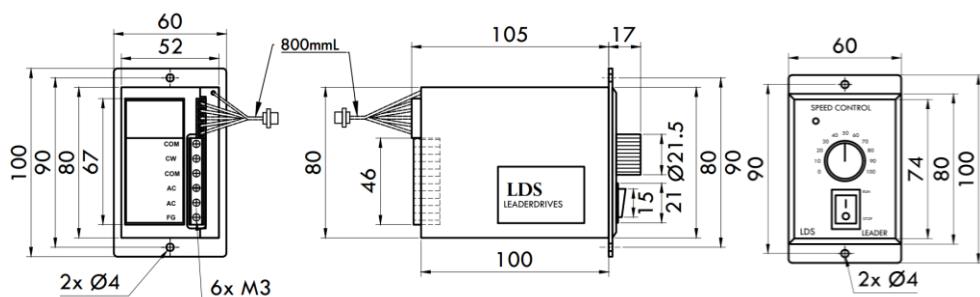

6W-250W

① USM71 - USM72 SERIES

UNIT TYPE SPEED CONTROLLER

POWER RATING : 6W ~ 250W

INPUT VOLTAGE : 1-PHASE 110V/240V

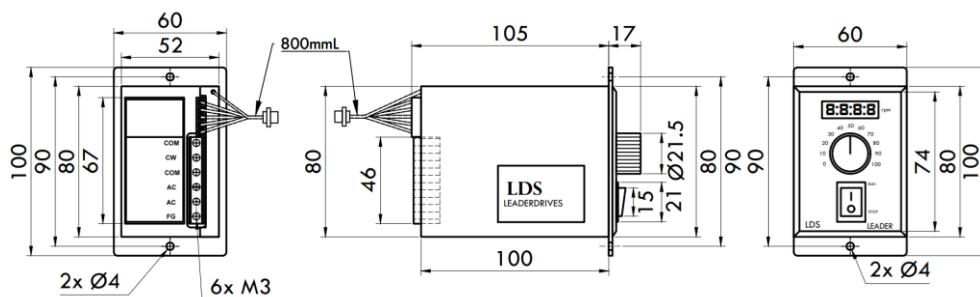

Cable Length of Controller : 800mm

② USM1000 - USM2000 SERIES

UNIT TYPE SPEED CONTROLLER WITH LED DIGITAL DISPLAY

POWER RATING : 6W ~ 250W

INPUT VOLTAGE : 1-PHASE 110V/240V

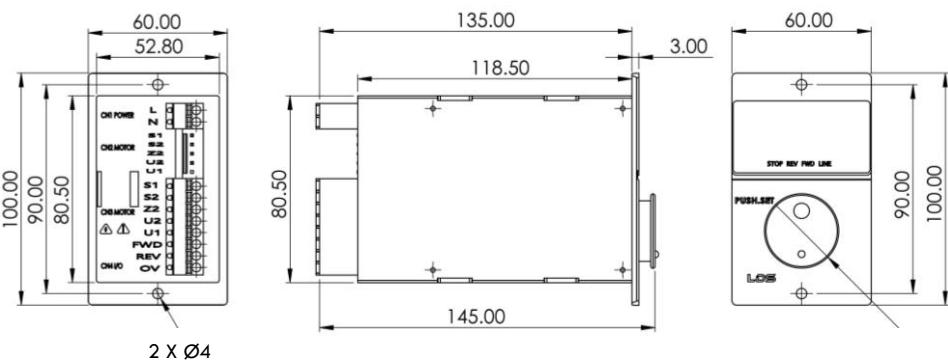

Cable Length of Controller : 800mm

③ USP72 SERIES

UNIT TYPE SPEED CONTROLLER

POWER RATING : 6W ~ 250W

INPUT VOLTAGE : 1-PHASE 220V

Cable Length of Controller : 800mm

④ DSC72 SERIES

DIN RAIL TYPE SPEED CONTROLLER WITH DIGITAL DISPLAY

USM SPEED CONTROLLER

TYPE-H

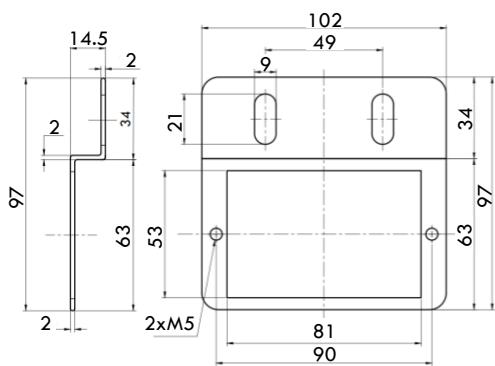

TYPE-V

(SIDE MOUNT)

FOR IGBT INVERTER &
USM SPEED CONTROLLER

TYPE-V

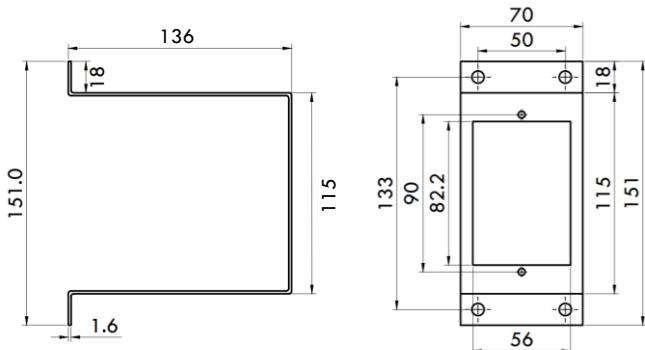

TYPE-U

(WALL-MOUNT)

FOR IGBT INVERTER &
USM SPEED CONTROLLER

TYPE-U

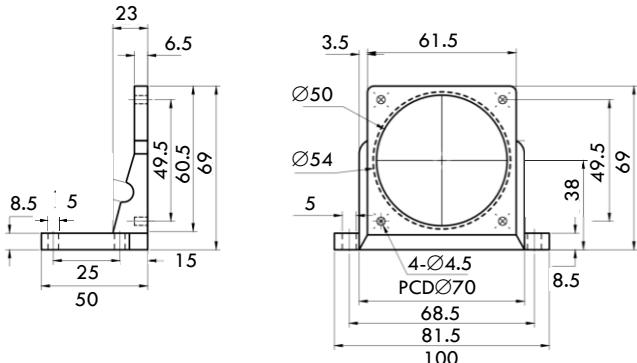

DIMENSION : ACCESSORIES OF COMPACT GEAR MOTOR

MOUNTING BRACKET COMPACT GEAR MOTOR

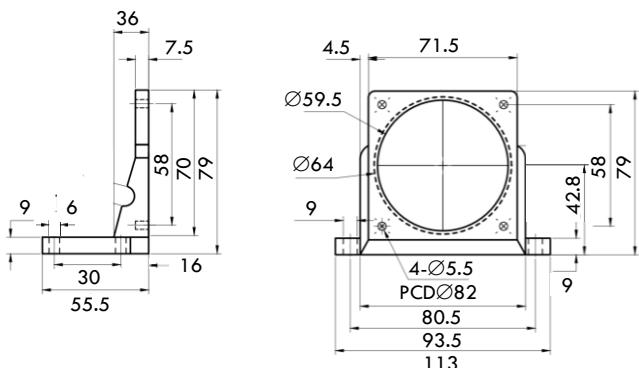

TYPE-F2 (FOOT MOUNTING)
FOR 40W ~ 200W
COMPACT GEAR MOTOR

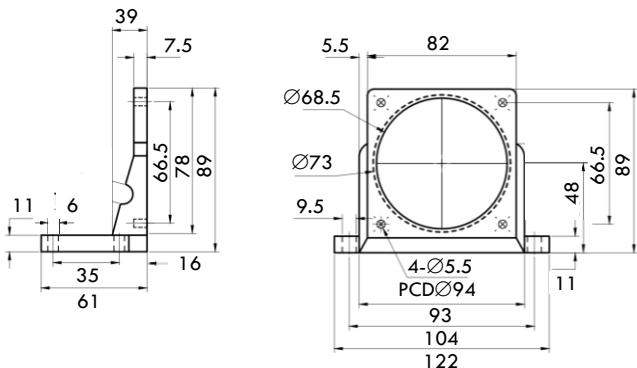

TYPE-F2#2 (FOR 6W MOTOR - 2IK & 2RK /2GN GEAR HEAD)

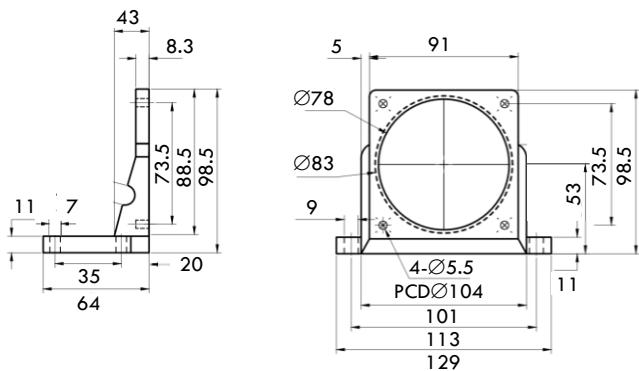

TYPE-F2#3 (FOR 15W MOTOR - 3IK & 3RK /3GN GEARHEAD)

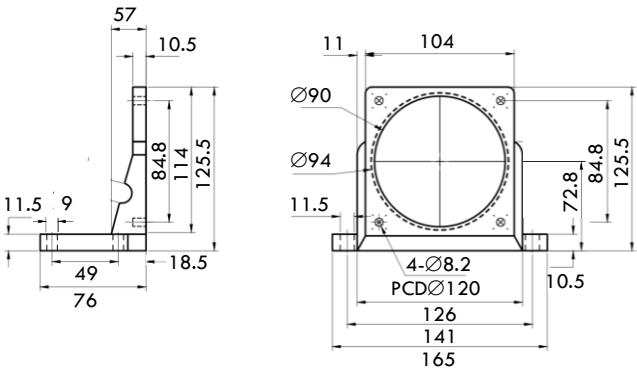

TYPE-F2#4 (FOR 25W MOTOR - 4IK & 4RK /4GN GEAR HEAD)

TYPE-F2#5 (FOR 40W-200W MOTOR - 5IK & 5RK /5GN & 5GU GEARHEAD)

TYPE-F2#6 (FOR 200W-250W MOTOR - 6IK & 6RK /6GU GEAR HEAD)

COMPACT GEAR ACCESSORIES :

AXIAL COOLING FAN 40CFM
(COACTIVE POWERFUL COOLING FAN)
1.7W / 32DBA / BLDC WITH
VAPOR BEARING

ACRYLIC PROTECTIVE
COVER FOR
IGBT INVERTER
(ACRYLIC MADE)

EXTENSION CABLE
FOR VARIABLE SPEED MOTOR.
AVAILABLE IN 1M • 1.5M • 2M
• 3M LENGTH

4-PIN CAPACITOR
0.8 ~ 24
MICROFARAD

OUTPUT FLANGE
FOR WORM GEAR
REDUCER
#30F • #40F

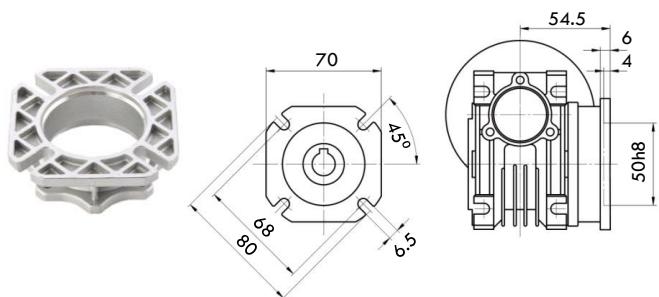

PROTECTIVE ENCLOSURE
FOR WORM GEAR
REDUCER
8MRV#30 • 8MRV#40

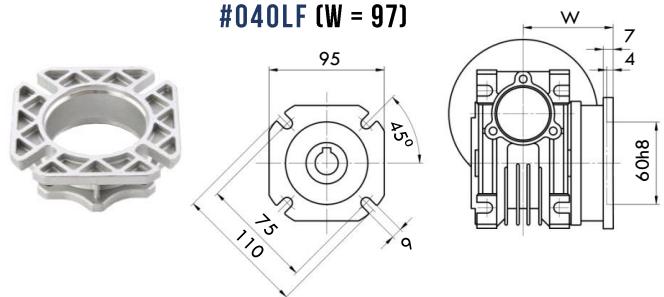

DIMENSION : ACCESSORIES OF COMPACT GEAR MOTOR

OUTPUT FLANGE FOR ALUMINIUM WORM GEAR REDCER

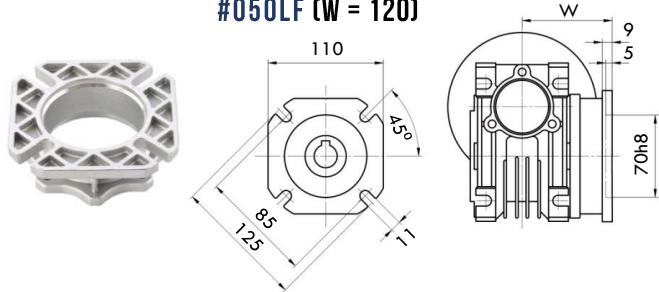

OUTPUT FLANGE : #030F

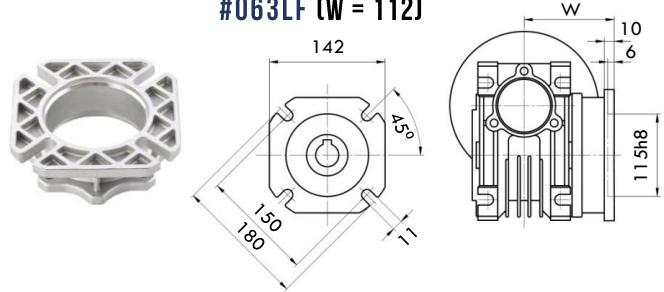

OUTPUT FLANGE : #040F (W = 67)
#040LF (W = 97)

OUTPUT FLANGE : #050F (W = 90) •
#050LF (W = 120)

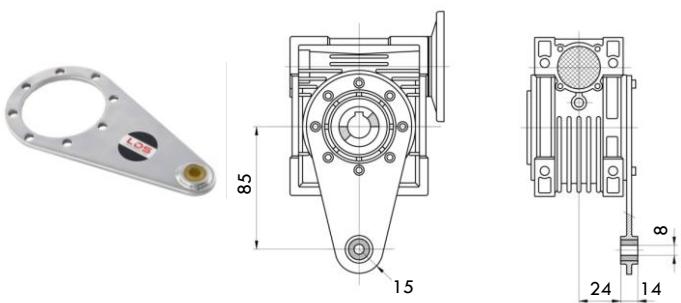

OUTPUT FLANGE : #063F (W = 82)
#063LF (W = 112)

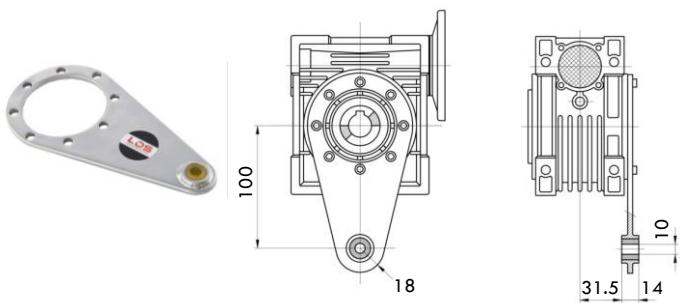

TORQUE ARM FOR ALUMINIUM WORM GEAR REDCER

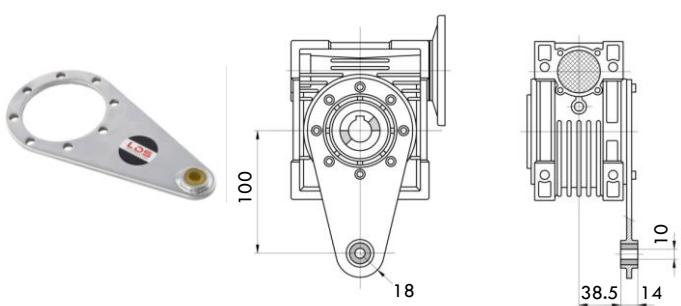

TORQUE ARM : #030TA

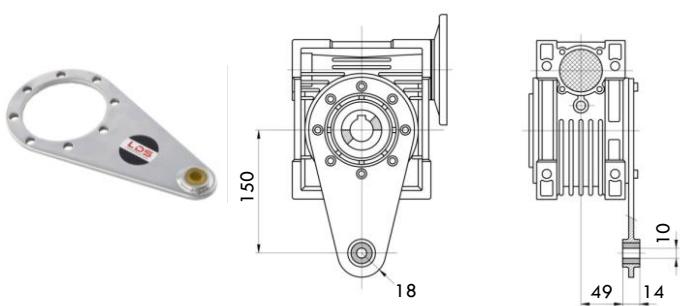

TORQUE ARM : #040TA

TORQUE ARM : #050TA

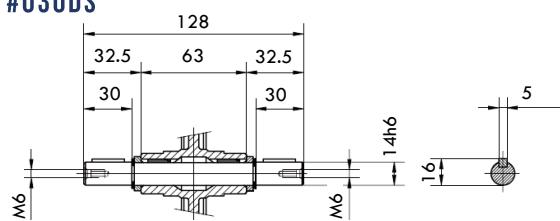

TORQUE ARM : #063TA

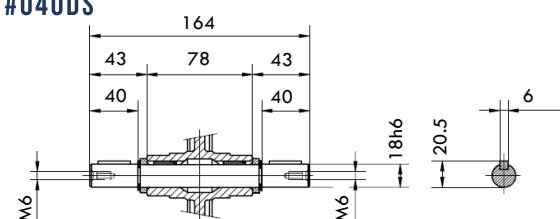

DIMENSION : ACCESSORIES OF COMPACT GEAR MOTOR

LOW SPEED OUTPUT SHAFT FOR ALUMINIUM WORM GEAR REDCER

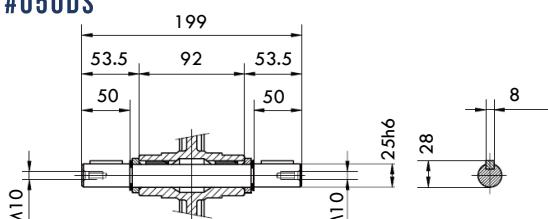

SINGLE OUTPUT SHAFT : #030SS
DOUBLE OUTPUT SHAFT : #030DS

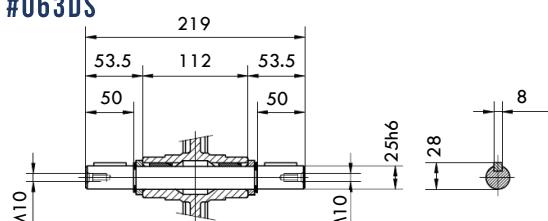

SINGLE OUTPUT SHAFT : #040SS
DOUBLE OUTPUT SHAFT : #040DS

SINGLE OUTPUT SHAFT : #050SS
DOUBLE OUTPUT SHAFT : #050DS

SINGLE OUTPUT SHAFT : #063SS
DOUBLE OUTPUT SHAFT : #063DS

CONNECTION DIAGRAM

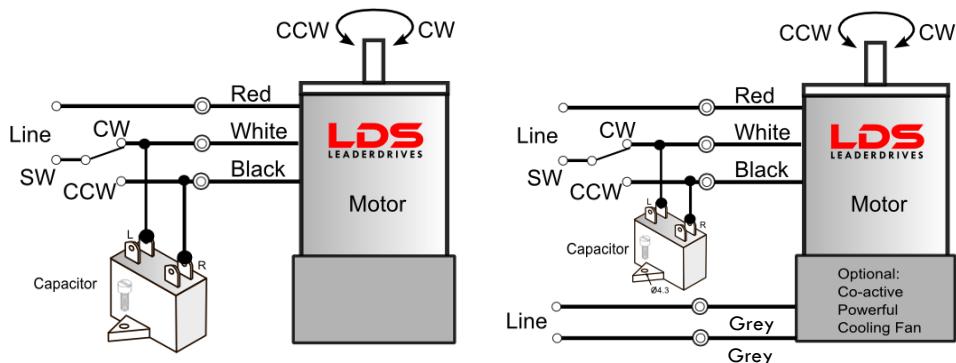

INDUCTION MOTOR • REVERSIBLE MOTOR (1PHASE)

Motor Input Voltage : AC 1Ø 100~110V • 1Ø 220~240V

Coactive Fan Input Voltage : AC 100~110V • AC 220~240V

Direction of Rotation:

To change the rotation, switch to CW or CCW connection.

INDUCTION MOTOR (3PHASE)

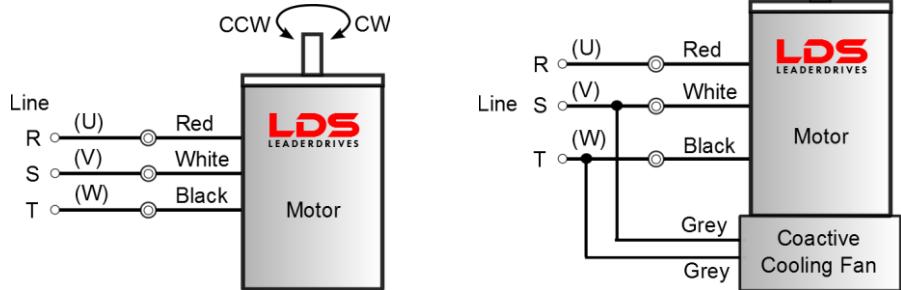

Motor Input Voltage : AC 3Ø 220~240V

Coactive Fan Input Voltage : AC 220~240V

Direction of Rotation:

To change the rotation, exchange any two wires between U, V and W.

* If the motor is powered by an inverter or electronic soft starter, use separate Power Supply 220V to connect to the Coactive Cooling Fan.

INDUCTION MOTOR (3PHASE - 6 WIRES)

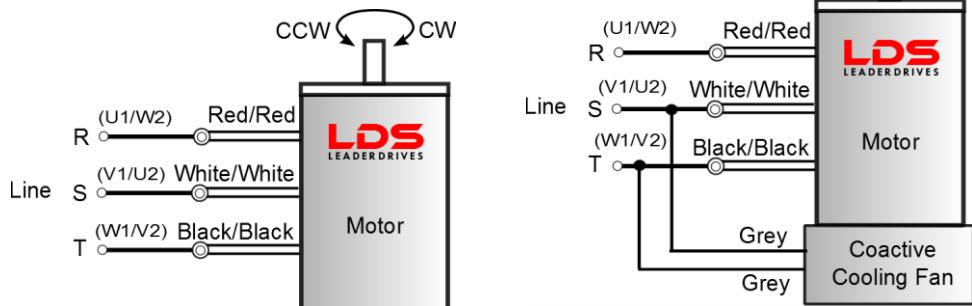

Motor Input Voltage : AC 3Ø 220~240V

Coactive Fan Input Voltage : AC 3Ø 220~240V

Direction of Rotation:

To change the rotation, exchange any two wires between U1/W2, V1/U2, and W1/V2.

* If the motor is powered by an inverter or electronic soft starter, use separate Power Supply 220V to connect to the Coactive Cooling Fan.

CONNECTION DIAGRAM

INDUCTION MOTOR (3PHASE - 6 WIRES)

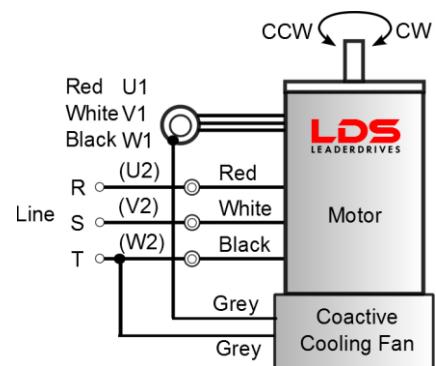

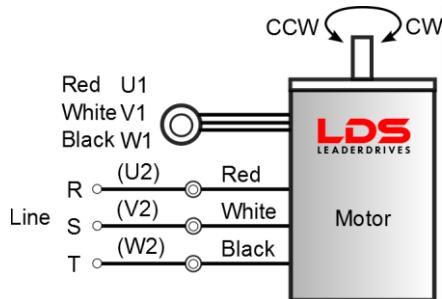

Motor Input Voltage : AC 3Ø 380~415V

Coactive Fan Input Voltage : AC 3Ø 220~240V

Direction of Rotation:

To change the rotation, exchange any two wires between U2, V2 and W2.

*If the motor is powered by an inverter or electronic soft starter, use separate Power Supply 220V to connect to the Coactive Cooling Fan.

INDUCTION MOTOR WITH TERMINAL BOX (3PHASE)

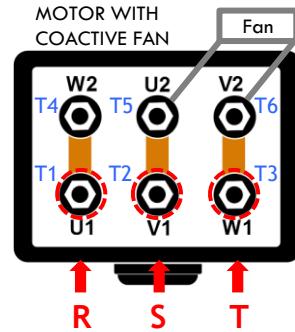

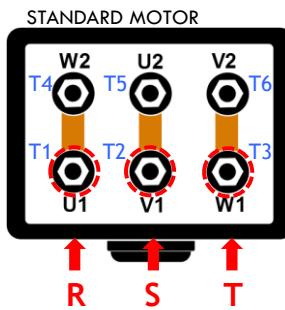

Motor Input Voltage : AC 3Ø 220~240V

Coactive Fan Input Voltage : AC 220~240V

Direction of Rotation:

To change the rotation, exchange any two wires between U1, V1 and W1.

* If the motor is powered by an inverter or electronic soft starter, use separate Power Supply 220V to connect to the Coactive Cooling Fan.

INDUCTION MOTOR WITH TERMINAL BOX (3PHASE)

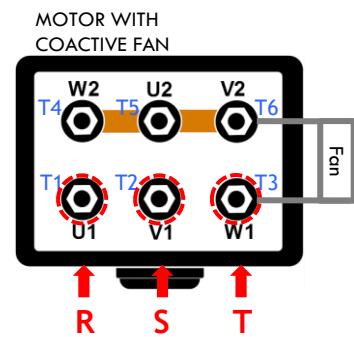

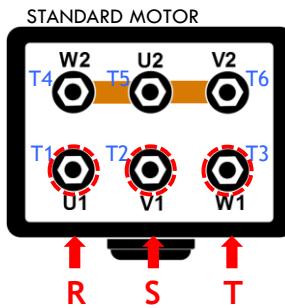

Motor Input Voltage : AC 3Ø 380~415V

Coactive Fan Input Voltage : AC 220~240V

Direction of Rotation:

To change the rotation, exchange any two wires between U1, V1 and W1.

* If the motor is powered by an inverter or electronic soft starter, use separate Power Supply 220V to connect to the Coactive Cooling Fan.

CONNECTION DIAGRAM

ELECTROMAGNETIC BRAKE MOTOR REVERSIBLE ELECTROMAGNETIC BRAKE MOTOR (1PHASE)

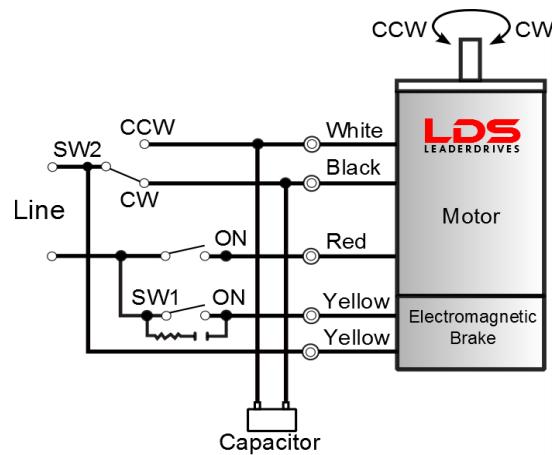

Motor Input Voltage : AC 1Ø 100~110V •
AC 1Ø 220~240V

Brake Input Voltage : AC 100~110V •
AC 220~240V
(Build-in AC to DC Rectifier Included)

Operation :

Run/Stop: SW 1 operates motor and electromagnetic brake action. Motor will rotate when SW1 is switched to ON (short circuit). When SW1 is switched to OFF (open), the motor stopped immediately by the electromagnetic brake and holds the load.

To release the brake while the motor is stopped, apply voltage between only two brake lead wires (yellow). The electromagnetic brake is release and the motor shaft can be rotated easily by hand.

ELECTROMAGNETIC BRAKE MOTOR (3PHASE)

Motor Input Voltage : AC 3Ø 220~240V

Brake Input Voltage : AC 220~240V (Build-in AC to DC Rectifier Included)

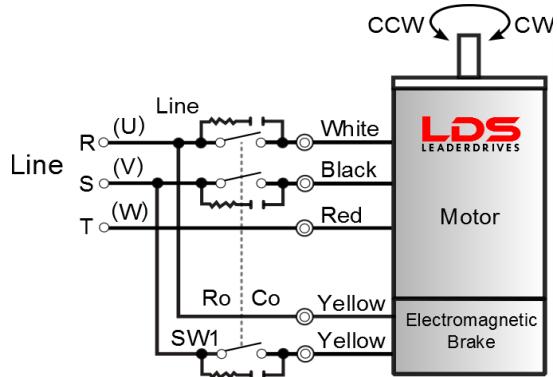

Operation :

Run/Stop: SW 1 operates motor and electromagnetic brake action. Motor will rotate when SW1 is switched to ON (short circuit). When SW1 is switched to OFF (open), the motor stopped immediately by the electromagnetic brake and holds the load.

To release the brake while the motor is stopped, apply voltage between only two brake lead wires (yellow). The electromagnetic brake is release and the motor shaft can be rotated easily by hand.

Direction of Rotation: To change the rotation, exchange any two wires between U, V and W.

* If the motor is powered by an inverter or electronic soft starter, use Relay or separate Power Supply 220V for Brake Rectifier.

ELECTROMAGNETIC BRAKE MOTOR (3PHASE – 6 WIRES)

Motor Input Voltage : AC 3Ø 380~415V

Brake Input Voltage : AC 220~240V
(Build-in AC to DC Rectifier Included)

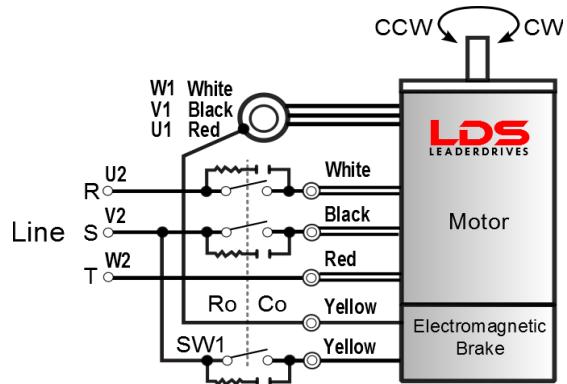

Operation :

Run/Stop: SW 1 operates motor and electromagnetic brake action. Motor will rotate when SW1 is switched to ON (short circuit). When SW1 is switched to OFF (open), the motor stopped immediately by the electromagnetic brake and holds the load.

To release the brake while the motor is stopped, apply voltage between only two brake lead wires (yellow). The electromagnetic brake is release and the motor shaft can be rotated easily by hand.

Direction of Rotation: To change the rotation, exchange any two wires between U2, V2 and W2.

* If the motor is powered by an inverter or electronic soft starter, use Relay or separate Power Supply 220V for Brake Rectifier.

CONNECTION DIAGRAM

CLUTCH & BRAKE MOTOR (1PHASE)

Motor Input Voltage : AC 1Ø 100~110V • 1Ø 220~240V

Clutch & Brake Input Voltage : DC 24V

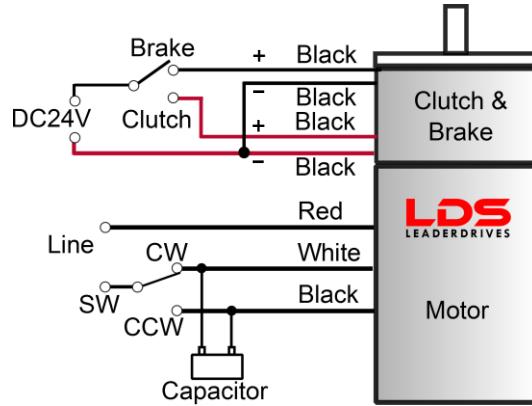

Operation:

Use separate power supply for the motor (AC) and the clutch and brake (AC to DC).

When the motor is rotating, connect the switch to the clutch, the output shaft will start rotating and transmits power accordingly.

When the motor is rotating, connect the switch to the brake, it will stop instantly and hold great retention force.

When the DC power is off, the output shaft can rotate freely.

CLUTCH & BRAKE MOTOR (3PHASE)

Motor Input Voltage : AC 3Ø 220~240V

Clutch & Brake Input Voltage : DC 24V

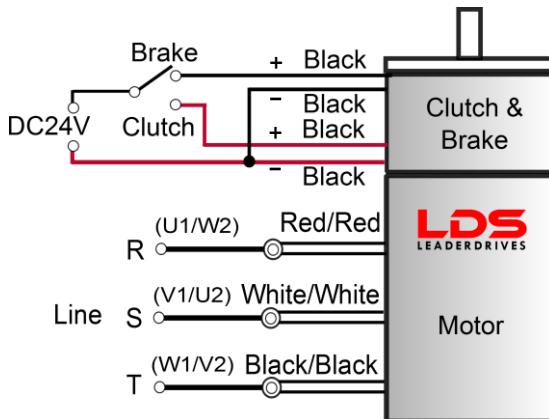

Operation:

Use separate power source for the motor (AC) and the clutch and brake (AC to DC).

When the motor is rotating, connect the switch to the clutch, the output shaft will start rotating and transmits power accordingly.

When the motor is rotating, connect the switch to the brake, it will stop instantly and hold great retention force.

When the DC power is off, the output shaft can rotate freely.

CONNECTION DIAGRAM

VARIABLE SPEED MOTOR WITH USM TYPE SPEED CONTROLLER (1PHASE)

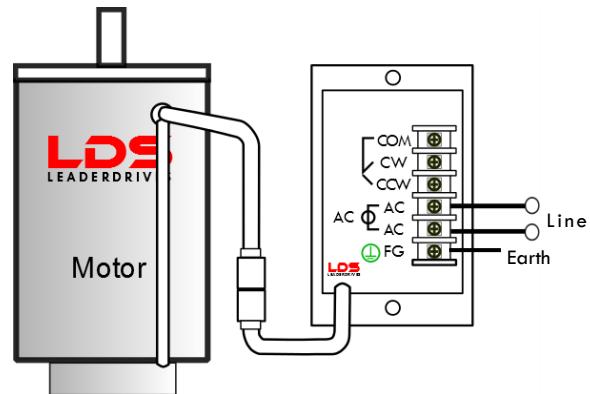

Motor Input Voltage : AC 1Ø 100~110V • 1Ø 220~240V
Controller Input Voltage : AC 1Ø 100~110V • 1Ø 220~240V

Operation:

Connect the motor lead wires connectors to the control unit (speed controller). Then connect the power cord to the power source.

Direction of Rotation:

To change the rotation, switch COM-CW to COM-CCW connection, and vice versa.

VARIABLE SPEED MOTOR WITH ELECTROMAGNETIC BRAKE AND USM TYPE SPEED CONTROLLER (1PHASE)

Motor Input Voltage : AC 1Ø 100~110V • 1Ø 220~240V
Controller Input Voltage : AC 1Ø 100~110V • 1Ø 220~240V
Brake Input Voltage : AC 100~110V • 220~240V
(Build-in AC to DC Rectifier Included)

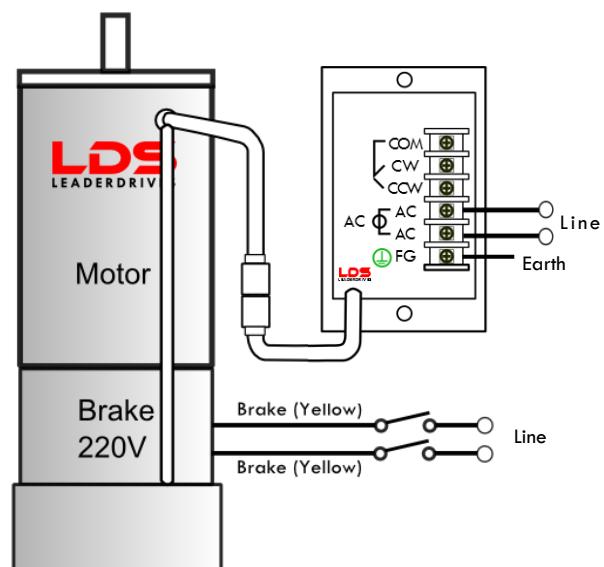

Operation:

Connect the motor lead wires connectors to the control unit (speed controller). Then connect the power cord to the power source.

Use Relay or separate Power Supply 110V/220V for the Brake Rectifier (Yellow Wire).

Direction of Rotation:

To change the rotation, switch COM-CW to COM-CCW connection, and vice versa.
